

Build your retirement number **in 4 moves**

Skip the guesswork. Four moves turn a vague target into the one number you act on.

BUILD THE NUMBER

Move 1: the spend

- ▶ Start from what retirement actually costs to fund, not a round number you've inherited.
- ▶ The pile is derived from spend, never chosen first.
- ▶ Get specific on today's annual lifestyle cost before doing anything else.

BUILD THE NUMBER

Move 2: gross it up

- ▶ Gross the spend up for tax, then inflate it to the year you'll actually retire.
- ▶ Today's dollars aren't retirement dollars.
- ▶ Skip this step and the whole number understates what you'll really need.

FIND THE GAP

Move 3: the sustainable draw

- ▶ Divide the inflated income by a sustainable draw rate.
- ▶ That figure is your base retirement number.
- ▶ It's an income problem worked backwards, not a wealth target.

FIND THE GAP

Move 4: subtract what you hold

- ▶ Subtract projected super and existing usable equity from the base number.
- ▶ What's left is the only figure that's actually yours to close.
- ▶ Everything else was already spoken for.

That's your gap.

Smaller and more specific than the number you started with, and the only one you act on. Full breakdown in this week's Property Notes.
